

MRP Production Control Software

## Online Engineering Systems Limited

MIE Solutions UK Ltd are supporting Online Engineering's future, as they dedicate themselves to the investment of the essential ERP manufacturing software – MIETrak Pro.

Online Engineering based in Gloucestershire, specialise in precision engineering. They are able to carry out a broad range of machining work in-house, utilising their extensive range of manual and computer controlled machines.

Online has a highly skilled, stable and committed workforce, trained to achieve the highest standards in precision machining. They are able to manufacture using the latest CAD software, guaranteeing customers requirements are dealt with in a fast and efficient process.

MIE Solutions once again can take pride in knowing we have installed our product MIETrak pro into another well established, thriving UK Manufacturing Company. We are proud to continue to grow with Online Engineering, offering to them our support and commitment

*"Having previously used an MRP system that didn't quite meet our requirements and required money being spent constantly, I was pleasantly surprised to discover that MIETrak offers all modules as standard, rather than charging for each individually.*

*Their training and support have been second to none and we have yet to be told that you can't do that' when requesting a change or a new report. Nothing is too much trouble and if they don't have an answer to hand, they let you know and keep you updated on the progress of the request.*

*We have recommended MIETrak to our sister companies one of whom has already made the switch. We would recommend MIE Solutions to anyone looking at bringing their MRP/scheduling system into the 21st Century, as our increased efficiency as a result of the system will more than pay for the product"*

**Jane Butler, Online Engineering**
